

TradeCoach

THE BASE DISCIPLINE AGENT

An AI trading discipline coach that lives in Base App chat, watches your wallet on-chain, and calls you out the moment you break **your own** trading rules. It never tells you what to buy. **Refusing to — that's the whole point.**

WHY THIS EXISTS

I lost \$300K to leveraged trading.

Not in one bad trade — in a pattern. A loss, then a bigger position to win it back. Another loss, more leverage. Trading at 2 AM. Re-entering minutes after getting liquidated, because **"I still had backup."** That backup feeling is the most expensive lie in trading — the account that feels like a cushion today is the account that's gone tomorrow.

When it was over, I understood: my problem was never strategy. It was psychology. And every symptom of trading psychology is **visible on-chain** — the rapid-fire trades, the size escalation after losses, the late-night entries, the revenge re-entry. It's all in the wallet history, timestamped. So I built the thing I needed and didn't have.

HOW IT WORKS

You trade on Avantis / Aerodrome / Uniswap

Everything lands on the Base blockchain

The agent reads the chain every 60 seconds, computes real USD values

Runs 10 behavior rules against YOUR plan — "did they break their own rule?"

Rule broken → signal fires (same signal max once per 4h — never spam)

A short, direct message hits your Base App DM (encrypted via XMTP)

The non-negotiable design rule: deterministic code decides *when* to message — never the AI. The AI only picks the words. The agent can't get moody, can't overreach, can't spam.

THE 10 PATTERNS IT CATCHES

SIGNAL	WHAT IT MEANS
Frequency spike	6+ trades in an hour — classic tilt
Size escalation	Position jumps 1.5× right after a loss — loss-chasing
Late night	Trading inside your own no-trade hours
Token churn	4+ different tokens in 2 hours — FOMO rotation
Drawdown velocity	Portfolio dropping 20% fast — the panic zone
Daily limit broken	More trades than YOUR daily cap
Size limit broken	Bigger than YOUR max position
Leverage escalation	3× → 10× right after a losing close — revenge dressed as conviction
Post-liquidation re-entry	New position within 30 minutes of a liquidation — the pattern that turns one bad day into a zero. Highest severity.
Oversized vs. portfolio	One trade = 15%+ of your portfolio — the "I have backup" fallacy

Plus a structured **liquidation post-mortem** when the worst happens, and exactly **one** evening check-in per day — anti-notification-fatigue is a product rule.

THE DISCIPLINE SCORE (0–100)

A rolling 14-day report card of plan adherence. Everyone starts at 100; violations subtract (liquidation –25, revenge re-entry –20, oversized trade –10...). Send **score**, get a shareable card. This later becomes an API — imagine perps platforms seeing which traders are disciplined enough to last.

USING IT — 30 SECONDS

DM `tradecoach.base.eth` in Base App:

```
0xYourWallet      → Step 1 ✓ (just paste your address)
set trades 5       → Step 2 ✓ (your daily trade limit)
set size 500       → Step 3 ✓ (your max position, USD)
```

Then trade like you normally do. You'll only hear from it when you break your own plan.

Commands: `status · score · rules · stop / resume`
Ask "should I buy ETH?" — **it refuses. Every time.**

UNDER THE HOOD

PIECE	WHAT / WHY
XMTP agent-sdk	Decentralized encrypted messaging — Base App chat runs on it; the agent is just a contact
viem	Reads the Base chain directly — trades, receipts, balances
Custom Avantis decoder	Perp opens, closes, liquidations — leverage is the real story
Price feed + receipts	Real USD per trade — size rules need dollars, not token amounts
Claude Haiku (optional)	Message wording, ~\$0.001/message — agent runs fully free without it
SQLite (built-in)	Users, rules, trades, scores — restart-proof, zero dependencies
TypeScript + Node	31 automated tests + full e2e conversation test
launchd + watchdog	Self-healing process — crashes recover in 10 seconds

Running cost today: ~\$0/month. At 100 users: ~\$16/month.

SHIPPED SO FAR

- ✓ Full agent live on **XMTP production** — working in Base App right now
- ✓ On-chain name: **tradecoach.base.eth**
- ✓ First user onboarded — validation phase running
- ✓ Open source (MIT): **github.com/SaurabhTiwari531/base-discipline-agent**
- ✓ Demo video with sound design, brand assets
- ✓ Hardened by real-user testing — reply storms, silent stream drops and crash loops found & fixed

WHAT'S NEXT

NOW	20 test traders from Avantis / Aerodrome communities → 2 weeks
GATE	If 10+ don't mute the agent → keep building
THEN	Base ecosystem grants (Builder Rewards + Builder Grants)
THEN	B2B for perps platforms: liquidated users churn forever, disciplined users generate fees for years — a retention tool
HERO	Hard Mode: a Solidity commitment contract — lock your own rules on-chain; breaking them requires a 24-hour timelock. Crypto-native self-exclusion.
LATER	Squad mode (group accountability) + Discipline Score API

"An agent that gives you signals is just another thing to blame.

TradeCoach enforces the only edge you actually control — your own discipline."
